Experience

Mulltiply **Sept 2024 – Present**
Software Engineer

- Architected and developed **large-scale B2B mobile applications** used by real customers, improving startup time and rendering performance by **40%** through optimized state management, rendering paths, and memory tuning.
- Implemented **clean, modular MVVM architecture** and scalable folder structures, enabling faster feature delivery and long-term maintainability across growing codebases.
- Designed and built **production-grade backend APIs** handling user preferences, real-time interactions, and business workflows, ensuring reliable data flow across mobile and backend systems.
- Developed a **behavior-driven recommendation system** combining recent user interactions, preference hierarchies, and fallback intelligence to improve relevance and engagement.
- Integrated **AI-powered semantic search and conversational workflows** using vector embeddings and pgvector, enabling intent-aware results and multilingual user interactions.
- Delivered features end to end across frontend, backend, and AI components while maintaining high standards for **code quality, testing, observability, and performance** in production.

Skills

Languages: JavaScript (ES6+), TypeScript, SQL, Java, Dart, HTML/CSS
Frameworks: React Native, React, Node.js, Express.js, Flutter
Libraries: Redux, React Navigation, Reanimated, FlashList, MMKV, Skia
Databases: PostgreSQL, MongoDB, MySQL, Firebase
AI & Search: LLM Integration, Prompt Engineering, Vector Embeddings, Semantic Retrieval
Tools: Git, GitHub, CI/CD, Expo EAS, Mixpanel, SonarQube, Sentry, Postman, React Profiler
Architecture & Patterns: MVVM, Clean Architecture, Modular Architecture, Role-Based Access Control, Multi-Tenant Systems

Projects

MulltiplyR & MulltiplyD — B2B Marketplace Apps | *React Native* **2024 – 2025**

- Worked on development of a B2B marketplace app (5,000+ downloads on Google Play) connecting retailers and distributors, enabling 10,000+ SKUs with real-time stock, GST invoicing, and AI-powered reorder predictions.
- Play Store: MulltiplyR Link
- Developed distributor-side app (100+ downloads) for order management, inventory tracking, and delivery assignment, integrated with real-time retailer app ecosystem.
- Play Store: MulltiplyD Link
- Implemented **deep linking, RBAC, multilingual support, OTA updates, and feature flagging** for scalable production deployments.
- Improved operational efficiency through **real-time data synchronization**, secure communication flows, and performance-focused frontend optimizations.
- Enhanced efficiency by enabling real-time updates, multi-user role handling, and secure communication channels.

AI-Powered Business Assistant (Multi-Tenant RAG Platform) | *Node.js, PostgreSQL, LLMs, React Native* **2025 – Present**

- Designed and built a **multi-tenant AI SaaS platform** enabling organizations to securely store internal documents and query them using a Retrieval-Augmented Generation (RAG) pipeline.
- Implemented **document versioning, intelligent chunking, embedding generation, and vector similarity search** to deliver accurate, context-aware responses.
- Built a **secure, role-based backend architecture** with organization-level data isolation, JWT authentication, and modular service design.
- Reduced AI hallucination and improved answer quality through **prompt constraints, retrieval tuning, and context filtering**.
- Extended AI workflows to **task and decision tracking**, enabling actionable intelligence beyond chat responses.

Education

Raj Kumar Goel Institute Of Technology (AKTU) **2020 – 2024**
Bachelor of Technology in Computer Science and Engineering (IoT) *CGPA: 8*
